

时: 1. 求 $\psi(x)$

$$\text{有限深方势阱 } V(x) = \begin{cases} -V_0, & -a \leq x \leq a \\ 0, & |x| > a \end{cases}$$

$$x < -a \text{ 时, } d^2\psi/dx^2 = k^2\psi, \quad k = \sqrt{\frac{2mE}{\hbar^2}}, \quad \text{则 } \psi(x) = Ae^{-kx} + Be^{kx}$$

$$\text{由于 } Ae^{-kx} \text{ 无物理意义, } \psi(x) = B e^{kx}$$

$$x > a \text{ 时, } \psi(x) = Fe^{-kx} + Ge^{kx}, \quad (\text{舍 } Ge^{kx})$$

$$-a < x < a \text{ 时, } d^2\psi/dx^2 = -l^2\psi, \quad l = \sqrt{\frac{2m(E+V_0)}{\hbar^2}}$$

$$\psi(x) = C \sin(lx) + D \cos(lx), \quad \text{由于 } \psi(-x) = -\psi(x) \Rightarrow \psi(0) = 0, \text{ 故 } \psi(x) = C \sin(lx)$$

故

$$\psi(x) = \begin{cases} Fe^{-kx}, & (x > a) \\ C \sin(lx), & (0 < x < a) \\ -\psi(-x), & x < 0 \end{cases}$$

$$2. \text{ 边界条件 } (x=a \text{ 处}): \text{ 波函数连续, 有 } C \sin(la) = Fe^{-ka} \quad (1)$$

$$\text{导数连续 } C \cdot l \cdot \cos(la) = -F \cdot k \cdot e^{-ka} \quad (2)$$

3. 推导超越方程

$$\frac{(2)}{(1)} \Rightarrow l \cot(la) = -k$$

$$\text{令 } Z = la, \quad \eta = ka, \quad Z_0^2 = Z^2 + \eta^2 = la^2 + k^2a^2 = \frac{2mV_0a^2}{\hbar^2}$$

$$Z^2 = \frac{2ma^2(E+V_0)}{\hbar^2}, \quad \text{又 } E < 0, \quad V_0 + E < V_0, \quad \text{故 } Z < Z_0$$

$$\text{超越方程为: } Z \cdot \cot Z = -\sqrt{Z_0^2 - Z^2}$$

4. 如右图

5. 讨论情况与束缚态存在性

1) 宽、深势阱 $Z_0 \gg 1, Z \approx n\pi$

$$= la = a \sqrt{\frac{2m(E+V_0)}{\hbar^2}} \Rightarrow E + V_0 \approx \frac{n^2\pi^2\hbar^2}{2ma^2}$$

$$\text{奇束缚态能量 } E_n \approx \frac{n^2\pi^2\hbar^2}{2ma^2} - V_0 \quad (n=1, 2, \dots)$$

2) 浅、窄势阱, $Z_0 \ll 1 < \frac{\pi}{2}$, 则 $Z < \frac{\pi}{2}$

$$Z \cdot \cot Z > 0, \quad -\sqrt{Z_0^2 - Z^2} < 0, \quad \text{无相交,}$$

没有奇束缚态
